EXPERIENCE THE TEC DIFFERENCE

SEAR, ROAST, SMOKE—100% INFRARED
**TEC DOES EVERYTHING – BETTER**

**Tender, juicy, charbroiled flavor**
Radiant glass panels block rising hot air from burners that dries out food, so food retains up to 35% more of its own juices. Food drippings are incinerated on the heated glass, creating a rich, smoky vapor that flavors food.

**Self-cleaning cooking surface**
Clean up is quick and easy—close the hood and turn your grill on high for 10-15 minutes. Food drippings and debris are incinerated.

**Rapid heat-up**
When preheating on high with the hood closed, TEC grills reach temperatures of 850° - 900°F in just 10 minutes.

**No flare-ups = no charred food**
Stainless steel cooking grates sit directly on top of the radiant glass panels, preventing air flow that ignites food drippings and causes flare-ups.

**No hot or cold spots**
Burners distribute heat evenly across the cooking grates. Every square inch of cooking surface is available for grilling, and temperatures can be easily controlled by the simple turn of a knob.

**Incredible temperature range:**
200° – 900°F

---

**Slow cooks, smokes, and sears**
Get the highest and lowest grilling temperatures of any infrared grill. Create mouth-watering grill marks with a quick sear, or utilize our incredible turndown to cook low and slow.

**Versatile enough to cook pizza**
We’ve found that infrared heat makes pizza crust crisp but does not dry it out. Whether you’re using fresh dough or pulling a pie out of the freezer, you’ll love the flavor and texture of pizza grilled on a TEC.

**Accessories ideal for crowds & entertaining**
Patterned after a commercial flat-top, our griddle is designed to distribute heat evenly across the cooking surface. It’s perfect for red-eye breakfasts during football season or grilling paninis for a quick lunch.

**Functions as a wind-resistant side burner**
Forget about pricey and unreliable side burners. On a TEC grill, you can place cookware directly on top of the radiant glass.

**TEC GRILLS**
TEC’S INFRARED TECHNOLOGY

It’s what sets us apart.

TEC manufactures the only grill that cooks with 100% infrared energy. We’ve totally eliminated the hot air associated with grilling, so food retains more of its own natural essence and comes off the grill with unparalleled juiciness and a distinctive charbroiled flavor. You can literally taste the difference.

Our radiant glass panels below the cooking grates are the secret to TEC’s juicy charbroiled flavor. They block rising hot air from the burners, so it never reaches the food to dry it out or ignite food drippings. You’ll rarely have a flare-up on a TEC grill.

To learn more, see our video at tecinfrared.com/introvideo

TEC’S OLD CERAMIC INFRARED TECHNOLOGY

Other infrared grills use TEC’s old ceramic infrared burners. Grates are heated unevenly, and although they cook hot and fast, they cannot cook at the lower temperatures needed for delicate foods, smoking, or barbecuing.

DISCOVER THE TEC DIFFERENCE

TEC’S NEW INFRARED TECHNOLOGY

100% Infrared Cooking

How low can you go?

200°-230°F on a TEC grill. Our patented infraredignon system offers the highest AND lowest grilling temps of any infrared grill available.

Pour on the sauce!

Burners are protected from food drippings, so pour marinades and beer directly on food while cooking. They’ll sizzle and steam on the glass and flavor food.

Even temperature across the grate.

Our burners are specially designed to distribute heat evenly across the cooking surface—no hot or cold spots.

CRAFTED WITH CARE

We build grills to last a lifetime. TEC’s first customers are still cooking on their very first grills that we manufactured over 40 years ago. That’s because we build grills to last a lifetime. And we support every grill that we have ever made with parts and service.

When Dr. Hugh Balkove of Columbia, South Carolina, recently moved, he passed down his 1979 Patio I to his son, Clarke.

Handcrafted in America of 304 stainless steel

TEC grills are handcrafted at our manufacturing plant in Columbia, South Carolina using the finest materials available, including corrosive-resistant 304 stainless steel.

These grills are made for entertaining.
A new generation of the world's first infrared grill. Rediscover this classic, now 100% infrared.

The release of the original Patio in the late ‘70s brought infrared grilling into backyards for the first time. The Patio revolutionized outdoor cooking by dramatically expanding the possibilities for preparing food on a grill. The Patio FR series is a throwback to these early days. We still hit high—and even higher—highs, but we’ve dropped our lows to a temperate 200°F. And our 100% infrared grilling system—the only one available today—preserves up to 35% more of the natural essence already in your food. We may have even saved the best for last: it’s a lot of grill for your money.

Both versatile and affordable, the G-Sport is the only full-sized grill available today certified for use on combustible surfaces, including wood. Designed to be used on a table or countertop or as a freestanding grill, it can also be placed on an outdoor island (with or without the side carrying handles) as an alternative to a built-in – no cutout required. Plus, it’s easy to carry to your favorite event or vacation destination with the towel bars on each side doubling as carrying handles.

The Cherokee is small and light enough to take anywhere. You can enjoy the same state-of-the-art infrared technology as our full-sized residential grills in this high-performance portable. And because it’s a TEC, you’ll find that the Cherokee can cook more food than traditional gas grills two to three times its size.
AMP UP YOUR GRILL GAME

TRANSFORMATIVE ACCESSORIES

Oyster roast!
Steam close to a bushel of oysters at a time on our gator rack.

GATOR RACK
Built for our 44” grills, this double-burner infrared smoker/roaster can cover the entire cooking surface of your grill, providing enough space to roast a whole hog or entertain a crowd. Or use it over one burner to free up grates for grilling.

CHIP CORRAL
Our chip corral holds up to 5 cups of chips, neatly containing wood while you smoke, so you don’t have to replenish as often.

INFRARED SMOKER/ROASTER
COMMERCIAL-STYLE GRIDDLE
FRYER/STEAMER
INFRARED PIZZA OVEN RACK
FRYER BASKET
This nifty accessory raises the warming rack from 3 ½” to 6” above the grates to provide additional clearance below to better access the grates at the back of the grill. It also reduces the surface temperature of the warming rack allowing finished food to stay warm but not continue to cook.

Attention to detail

Access doors and drawers feature 304 stainless steel construction and pulls, spring loaded hinges and self-closing drawer slides.
HOT SMOKED SALMON

Hot smoked salmon is different than the smoked salmon you might be thinking of. You've probably seen packages of smoked salmon in the market or at your local bagel shop. That type is cold-smoked, cured under 90ºF. Hot smoked salmon is prepared anywhere from 100º-300ºF, resulting in a firm yet flaky fish. TEC's cold-smoked, cured under 90ºF. Hot smoked salmon is prepared different than the smoked salmon you might be thinking of.

INGREDIENTS:
1 lb salmon fillet
FOR THE CURE:
1/2 cup brown sugar
1/2 cup salt
1 tablespoon black pepper
Pinch or two of red chili flakes
Wood plank (cooler is great for fish)
Wood chips
EQUIPMENT:
TEC Smoker/Roaster

1. Rinse the salmon under cold water, and pat it dry. Feel along the fillet for any bones, and use fish tongs to remove them.

2. Stir the dry ingredients together in a small bowl, double the recipe for larger or multiple fillets. Place one quarter of the cure in the bottom of a baking dish, place the salmon on top, skin side down, then space out the rest on top. Gently pats to adhere the cure to the salmon.

3. Refrigerate uncovered for 3-4 hours, checking each hour to space the cure that slides off top on the fish.

4. After the cure, pat the salmon dry, and pat on a clean plate. Refrigerate uncovered for another 2 hours until the flesh is dry and somewhat leathery.

5. Smoke the salmon.

1. Remove the salmon from the refrigerator, and place the wood planks in water. The fish should sit at room temperature, or chilled.

2. Place the infrared smoker/roaster on the grill, and add wood chips as needed to keep the smoke going. The wood chips should be around 140ºF.

3. Place the fish on the soaked wood plank, set the planked摆在高温下30分钟。烟熏的鱼可以直接放在烟熏架上，然后关闭盖子。

4. Remove the salmon from the refrigerator, and place it directly on the smoker rack, and close the hood. Smoke the salmon for about one hour, adding more wood chips as needed to keep the smoke going. The fish is ready when it is firm to the touch, flakes easily, and the internal temperature should be around 140ºF.

5. Remove the salmon from the grill, and let it rest for 10 minutes. Hot smoked salmon can be served hot, at room temperature, or chilled.
